

APPENDIX 1 INTEGRATED LIST OF ALL WATERS

Purpose of the Integrated List

In the 2004 303(d) Impaired Waters Report, Virginia categorized assessed waters in an integrated format for the first time. Virginia has worked closely with the United States Environmental Protection Agency (EPA) to develop an Integrated Report that meets the current EPA assessment guidance and is also representative of the monitoring program and assessment methodology used in Virginia.

The 2012 integrated list is a general list of all assessed surface waters in Virginia derived from an EPA database known as the Assessment Database (ADB). A description of each of the 2012 assessment categories and sub-categories used in ADB can be found below. They include both EPA-defined categories and Virginia-defined subcategories agreed to by EPA through their review of DEQ guidance for the 2012 water quality assessment. DEQ draft guidance, describing the various assessment methodologies, was released in March 2011, revised in response to EPA and public comment, and finalized in June 2011. The 2012 305(b)/303(d) Water Quality Assessment Guidance Manual can be found on the DEQ website at <http://www.deq.virginia.gov/wqa/>.

The Integrated List uses the highest numbered category that applies to all of the assessed designated uses for a given segment. For instance, if a water is assessed as category 5A for the aquatic life use but attains all other assessed uses, the water is categorized as category 5A. Impaired waters fact sheets provide details about individual segments in Category 5. These fact sheets can be found at the aforementioned website.

Assessed waters in the Virginia 2012 Integrated List were placed in one of the following categories and subcategories:

FULLY SUPPORTING – Waters are supporting one or more designated uses

- **EPA Category 1:** Attaining all associated designated uses and no designated use is threatened.
- **EPA Category 2:** Some of the designated uses are met but there is insufficient data to determine if remaining designated uses are met.

Va. Category 2A - waters are attaining all of the uses for which they are monitored and there is insufficient data to document the attainment of all uses.

Va. Category 2B - waters are of concern to the state but no water quality standard exists for a specific pollutant, or the water exceeds a state screening value. These waters are considered fully supporting with observed effects.

Va. Category 2C - waters are now attaining the use(s) for which they were originally 303(d) listed and the TMDL is EPA approved, but other applicable use(s) were not monitored and assessed.

INDETERMINATE – Waters needing additional information

- **EPA Category 3:** Insufficient data to determine whether any designated uses are met

Va. Category 3A - no data are available within the data window of the current assessment to determine if any designated use is attained and the water was not previously listed as impaired.

Va. Category 3B - some data exists but is insufficient to determine attainment of designated uses. Such waters will be a prioritized for follow up monitoring.

Va. Category 3C - data collected by a citizen monitoring or other organization indicating water quality problems may exist but the methodology and/or data quality has not been approved for a determination of attainment of designated uses. These waters are considered as having insufficient data with observed effects. Such waters will be a prioritized for follow-up monitoring.

Va. Category 3D - data collected by a citizen monitoring or other organization indicate that designated uses are attained, but the methodology and/or data quality has not been approved for such a determination.

IMPAIRED – Waters are impaired or threatened but a TMDL is not needed.

- **EPA Category 4A** - impaired or threatened for one or more designated uses, but does not require a TMDL because the TMDL for specific pollutant(s) is complete and US EPA approved.
- **EPA Category 4B** - impaired or threatened for one or more designated uses, but does not require the development of a TMDL because other pollution control requirements (such as VPDES limits under a compliance schedule) are reasonably expected to result in attainment of the water quality standard by the next reporting period or permit cycle.
- **EPA Category 4C** - impaired or threatened for one or more designated uses, but does not require a TMDL because the impairment is not caused by a pollutant and/or is determined to be caused by natural conditions.

IMPAIRED – requiring a TMDL

- **EPA Category 5: Waters are impaired or threatened and a TMDL is needed.**

Va. Category 5A - the water quality standard is not attained. The AU is impaired or threatened for one or more designated uses by a pollutant(s) and requires a TMDL (303d list).

Va. Category 5B - the water quality standard for shellfish use is not attained. One or more pollutants remain requiring TMDL development.

Va. Category 5C - the water quality standard is not attained due to suspected natural conditions. The AU is impaired for one or more designated uses by a pollutant(s) and may require a TMDL (303d list). Standards for these waters may be re-evaluated due to the effects of natural conditions.

Va. Category 5D - the water quality standard is not attained where TMDLs for a pollutant(s) have been developed but one or more pollutants remain requiring TMDL development.

Va. Category 5E - effluent limited waters are not expected to meet compliance schedules by next permit cycle or reporting period.

Va. Category 5F - the water quality standard is attained for a pollutant(s) with a TMDL and 303(d) delisting approved, but the water remains impaired for additional pollutant(s) requiring TMDL development.

Va. Category 5M – waters impaired due to atmospheric mercury.
